

August 2018

To Whom It May Concern:

Our supplier of the raw material has informed us that some of the chemicals used in the manufacturing of Langer's PPT products appear on the current List of Chemicals Known to the State of California to Cause Cancer or Reproductive Toxicity. The list is published annually as a requirement of Proposition 65, Safe Drinking Water and Toxic Enforcement Act of 1986.

The chemicals listed below are used in the production process:

Chemical Name	CAS Number	Concentration by weight
Furan	110-00-9	<0.003%
Propylene Oxide	75-56-9	<0.001%
Cobalt	7440-48-4	<0.0005%

As you may know, Proposition 65 was not written with specific limits below which chemicals are not considered to be hazardous. It is our company's recommendation that if your product contains PPT and is subject to the requirements of Proposition 65, then it should be labeled as per the requirements of Proposition 65 as Containing Chemicals Known to the State of California to Cause Cancer or Reproductive Toxicity. This approach is conservative and is consistent with the initial intent of the legislation.

This response is based on information received from the supplier of the raw material. The information is accurate to the best of our knowledge.

We would like to thank you for your continued support. If there are any questions/concerns, please do contact us and we will do our very best to address them.

Sincerely,

Peter Karolidis  
VP Sales & Marketing  
OHI
